There was no response. This idea can be improved upon by opening it up to undergraduate students.

Lessons learned from the failure of direct approach to academe, administration, faculty and students, suggested that a strategy designed to engage elite groups might result in the creation of political cover that would make it safe for academe to get involved, and to provide a cultural sensitive foundation for a global dialogue.

The Cosmic Humanity Briefing

To implement this new strategy, Neil Freer and I created a three-part presentation designed to provide the evidence of ancient contact, modern era contact and dialogue on meaning and needful action. In April 2011, I had the first opportunity to present this briefing at three venues in India. The briefing is designed to be presented by two persons over a two-day period. However, Freer could not make the trip to India, and the presentation had to be edited to fit three different time periods scheduled at the three venues.

Personal contacts in India were recruited to assist in arranging briefing venues in Pune and New Delhi, India. The first presentation was at the Maharashtra Institute of Technology (MIT) at Pune. The senior scientist at the Centre for Biofield Sciences, Dr. R.N. Shukla, Ph.D., D.Sc., D.LIT. was my formal host. He had invited ten of his personal scientist friends for the presentation. One of these was Dr. Deglurkar, who is Vice Chancellor, Deccan College. He insisted after the successful MIT presentation that I accompany him to his school to make a second presentation. Dr. Deglurkar called ahead and we were met by some of his senior staff when we drove up to the Deccan College library.

The full title of the college is Deccan College Post Graduate and Research Institute (DCPRI). The school is the third oldest educational institution in India, dating from 1821 when it was established as the Hindoo College. In 1864 it was renamed Deccan College. In its current status it offers postgraduate instruction in Ancient India History, Culture and Archaeology, Linguistics, Medieval and Maratha History, Sociology-Anthropology, and Sanskrit Studies. Students have produced over 500 Ph.D. dissertations in these studies. In recognition of the excellence achieved by the Institute both in teaching and research, in 1990 it was awarded the status of a Deemed University.

After a short Library tour we were guided to a conference room where tea was served and the Vice Chancellor introduced me and asked me to tell his staff the purpose of my visit to India and Deccan College. I briefly addressed the

issues of Earth's ancient contact with the Anunnaki and its home planet Nibiru, the challenge of the return of Nibiru (Planet X) sometime during this century, and the alien/human nexus. I ended by asking them to search the library's holding on Indian Astrology to see if references to the Moon and any of the planets carried a suggestion that in addition to their importance in astrology, there might be reference to some of them being Extraterrestrial bases, and if Nibiru and the Anunnaki were cited in any of their ancient manuscripts. This request was made to see if we could surface any new documentary links to the extensive Sumerian documentation.

A small party was then driven to a building housing the Department of Archeology where Professor Vasant Shivram Shinde met us. In addition to his thirty-years teaching archeology and conducting fieldwork in digs around India, Shinde is also the Joint Director of Deccan College, number three in college administration.

In his outer office he showed me a two-inch thick bound report of excavations at Madina (Late Harappan-PGW site in Rohtak District, Haryana) 2007-2008. Dr. Shinde is an expert on the ancient Harappan Culture of India. He has written that the Dhola Veera Harappan site in Kutch, Gujarat is much more important than Mohenjo-daro. It is an entire city made in stone instead of mud bricks, It has an 18-metre fortification wall and it has unparalleled water management techniques. The area was as arid as it is today, but there were two large streams that were prone to flash floods. The city was divided into three parts, with each having its own tanks and water from these floods were diverted into the tanks with underground pipes. Shinde has directed excavations at this site. He has also directed excavations at Farmana (Rohtak District) in 2007-2009, where a discovery of one of the largest Harappan cemeteries, with around 70 burials has been located.

Mohenjo-daro is mentioned in Sumer archeological research as an outpost of the Anunnaki settlement in Mesopotamia. I provided Dr. Shinde with copies of Zecharia Sitchin's books and he has become a valuable supporter of getting the global dialogue started about the ancient and modern ET/Earth relationship.

Deccan College was an obvious candidate to research and write a White Paper about the impact to India of acknowledging the ET/Earth relationship. For months it appeared that this would happen, but Dr. Deglurkar quietly withdrew his support of the idea without giving a reason. When we questioned our ET sources about this, they indicated that the government in India had vetoed the project. If this was the case, that decision was made in New Delhi after a very successful presentation was made at the India International Centre.

New Delhi and a Tad of Mystery

I was met at the airport by Come Carpentier de Gourdon who had coordinated an excellent New Delhi program for me. The centerpiece of this was an afternoon talk at the India International Centre. The IIC is a very prestigious institution in New Delhi. John D. Rockefeller III, brother of Laurance Rockefeller, provided early and critical funding support for its creation.

As a speaker at the IIC, I was invited to become a temporary member of the club and therefore qualified to stay in its hostel and use its dining facilities. It also enabled me to host meetings arranged by Come and my second New Delhi resource person, Manmohan Sharma. Sharma is the Executive Secretary of the Indian Association of Parliamentarians on Population and Development (IAPPD). Sharma's government contacts are outstanding. Come and Manmohan worked effectively together and I had a full plate at Delhi as the result of their collaboration.

The IIC is the premier venue in New Delhi for intellectual stimulation. Come was asked by his IIC staff contact to change the proffered title of my presentation to something with more intrigue. The suggested title change was more than intriguing; it was a bait and switch move that required a bit of rewrite and removal of some material to keep the presentation within one hour. The negotiated new title of my talk was: **Cosmic Implications of Paranormal Research and Interests in the US Military and Intelligence Community**. Since the IIC program schedule is sent to all embassies, I thought that perhaps a couple of U.S. Men in Black would show up. I checked the audience very carefully, and everyone appeared completely innocent of Black Ops affiliation.

An outstanding number of questions came from the audience following the presentation. After more than an hour of them we had to firmly close it down. I have entertained the thought that the suggested title change came from the fertile mind of an Indian counter-intelligence officer to see if it would smoke out anyone from the New Delhi diplomatic community that they had not identified with intelligence responsibilities.

Perhaps the most important government contact was a Member of the Rajya Sabha (India's Parliament Council of States). Professor P.J. Kurien, MP, Congress Party Member from Kerala. He is a very senior Member of Parliament, having served six five-year terms in the Lok Sabha (House of the People), and now in his second six-year term of the Rajya Sabha. Accompanied by two of his Rajya Sabha colleagues he came to the IIC to meet. Over tea I briefed that group on the purpose of the visit to India. Because Kurien is a senior member of the Rajya Sabha Defense Committee, I detailed some of the U.S. military/ET contact experiences. He became very interested when I related the

accounts of UFOs hovering low over U.S. ICBM sites and concomitant loss of operational control of a number of ICBMs in underground silos. This is part of an understanding that some ET groups are most concerned about nuclear weapons. I gave Kurien a copy of the Outer Space Security and Development Treaty, indicating that a copy of the treaty would also be given to the Minister of External Affairs and Ambassadors to India from China, Pakistan and the Russian Federation. We agreed to keep in touch. Subsequently I send him a copy of Robert Salas's book *Faded Giant*, that details the 1967 Malmstrom AFB Missile/UFO Incident, and asked him to push the Indian government to adopt the treaty what will ban all space-based weapons.

By special courier I sent a copy of the Space Treaty and a special gift to the Chinese, Pakistan and Russian Federation ambassadors to India. Previous to this I had requested a separate meeting with each of them, and gave a personal invitation to my IIC presentation. There had been no response to these communications. That was not unexpected. The gift was a one and a half inch square, three-quarter inch thick bronze cuboid. One side had a reproduction of a Harappa seal in deep relief. On the opposite side was the word PEACE above the P.E.A.C.E. Inc. logo, also in deep relief. I sent a follow-up email letter to each of them, explaining the bronze gift. The Harappa seal represents the continuing mystery of our alien origin that will be resolved with disclosure when extraordinary opportunities will develop provided certain conditions are met. The other side of the bronze cuboid is a reminder that solutions to potential Earth-ending issues will only be recognized through a lens of peace, and achieved by too long delayed and difficult decisions that all countries must make, particularly the current nuclear powers. All classes of weapons of mass destruction are a curse upon civilization. They are a denial of what it means to be civilized. The Visiting Other have made it very clear that support for Earth that they can provide will only be available to a peaceful, nuclear weapons free planet.

* Manmohan had arranged for a meeting with Scientist Shantanu Bhatawdekar, Officer on Special Duty at the Indian Space Research Organization, Department of Space. Bhatawdekar's office was decorated with a number of photographs provided by India's successful moon orbiting satellite. Our conversation about this achievement was certainly guarded on his part. My suggestions that India may have learned much more from this accomplishment than they had made public were comfortably deflected. I did not expect him to confirm what our ET sources have told us about the presence of ET facilities on the avert side of the moon.

Of all nations, India's cultural heritage is most sympathetic to an ancient reality of extraterrestrial contact with Earth. However, India is an important player in the modern world and its government plays its political and diplomatic cards with care. When a White Paper is written that assesses India's public response to affirmed knowledge of Earth/ET contact in the current era, it will most likely be one of excitement and pride that they knew this all the time.

The Treaty: a New Strategy with an Essential Partnership

Much has been learned over the years by the failure of various iterations of Plan C to accomplish its objective: start a global dialogue about a future when there is no ambiguity about Earth/ET contact. The importance of the dialogue has been a repeated input from ET sources for years. The message has been consistent. The dialogue is an essential part of the process of disclosure. Increased sightings are also part of the process. The dialogue itself will surface other essential parts of the process, particularly involving violence on Earth and obvious political and economic decisions that must be made. Knowledge of helpful technologies from ETs will not exceed that already seeded in the minds of thousands on Earth. "Listen and act on the messages you have already received."

What new does the Outer Space Security and Development Treaty bring to the table? The value added came in a simple, quiet thought when drafting the Treaty was well along. "Would you consider adding Cosmic Culture to the Treaty?" My response was a quick "yes," and that I would recommend that to the Treaty team. Carol Rosin is the team leader with years of experience with space treaties when she founded the Institute for Security and Cooperation in Space. Other members brought relevant experiences and skills to the team. Commander Will Miller, USN Retired was an advisor to the White House, U.S. Space Command, and the Department of Defense; Apollo Astronaut Captain Dr. Edgar Mitchell, USN Retired, and founder of the Institute of Noetic Science; Aerospace Executive and engineer Abe Kriger with Boeing for 37 years, joint U.S./Russian space programs; Honorable Paul Heller, former Minister of Defense, Canada; and myself. The team response to this idea from the ETs was immediately positive. All of the Team members realized that this request for ET inclusion was a very important as it quickly addressed the issue of verification when the Treaty became law. The language in the Treaty about the inclusion of Cosmic Cultures is straightforward. In the opening paragraphs:

"This Treaty invites Nation States to become Signatories to this Treaty and invites all parties, including Nation States, Indigenous Nations and Cosmic Cultures, to commit to plan and assist in the orderly development and

implementation of a framework and procedures that will assure and verify that space is and will remain a neutral realm from which all classes of space-based weapons are banned in perpetuity.”

This is followed by these entries in “The Parties to this Treaty” section:

“Acknowledge that we are not alone in the universe, that there are Cosmic Cultures that will be important allies for our security and development, and that our national and international policies must reflect this reality.”

“Acknowledge that from the beginning of nuclear weapon testing, extraterrestrial craft have demonstrated a capability to selectively shut down communications and/or the power of participating units, and have appeared over ICBM fields in several countries causing non-destructive failure of dozens of ICBMs – taking them out of operational control for days”

“Realize that the demonstrated capability of extraterrestrial cultures from the multiverse to neutralize any missile or nuclear capability is in itself not a threat message, but does serve notice of our limited understanding of physics and the clearly dangerous consequences of continuing to use destructive technologies.”

“Affirm that the possibility of reclaiming a peaceful future for humankind and a safe environment on Earth is intimately linked with curbing violence toward each other and Earth, and with preparing to survive as Gaea heals herself, and that counsel and support from Cosmic Civilizations thousands of years our senior would be exceedingly helpful.”

“Are inspired by the great prospect of Earth taking its rightful place in the Cosmos and the citizens of off-Earth realms sharing the fruits of their cultures with humankind.”

“Understand that this space Treaty is now verifiable and enforceable via applying monitoring, observation, and information sharing techniques existing and forthcoming”

“Realize we are one interconnected and interdependent human species, and we are determined to live in peace with all our neighbors on Earth and in the universes.”

The above seven declarations in the Treaty are those that make a direct references to Cosmic Cultures and their enduring role in our lives, now and in the future. The other fourteen declarations also address the importance of the Treaty but without making reference to Cosmic Cultures.

When this Treaty becomes international and space law, Earth will have stepped back from a perilous future. It will do more. The process of getting it into the corpus of international law will also be a pathway to create the political cover needed for academe to play a leading role in starting the essential dialogue about disclosure. The plan is simple, but dependent upon invitation to meet with Heads of States in order to formally present the Treaty and to get it signed.

The strategy to secure invitations to meet with Heads of States involves establishing partnerships with individuals, businesses and organizations that share the vision that the Treaty will accomplish and who already have the necessary international contacts.

The first order of business is to get the Treaty signed into law. In that undertaking the existence and role of the Cosmic Community in the Treaty will be most obvious. We fully anticipate that advisors to the Head of States and the Head of States themselves will have questions about how the Cosmic Cultures became involved. This will open the door to more than the Treaty/ET link.

But Wait – There is More!

To the degree that Heads of State show interest in learning more about the current Earth/ET nexus, we will move into the ET request to start a global dialogue about the challenges and opportunities of that relationship. We will ask the Head of State to identify one or more university in his/her country who he/she thinks would be qualified to research and write a White Paper about the short term and long term impact on his/her country and culture of recognizing contact. The response to that question could provide the ultimate political cover for one or more White paper being created.

When Head of State approval is given for the White paper, we will meet with the identified university or universities and establish a working relationship with the designated leader of that program and provide support with presentations and documentation to assist the effort. We will suggest the four month delivery time, and link them with universities in other countries involved in the White Paper program for their country.

We have been given additional information about future communications between Earth and the Cosmic Community that we will share first with interested Heads of States. The background is that approximately 5,000 years ago Cosmic Cultures placed communication devices in four different Earth locations. Each of them is destined to be activated at a different future time period. Activation will be essentially determined by the level on consciousness on Earth. I was directed to the location of the first of these locations where the device will be activated. A protocol has been given about how the system will work when Earth is qualified to use it. Explicitly, when the Outer Space Security and Development Treaty becomes law, the White Paper supported global dialogue is underway, and other economic and political policy decisions are made that move Earth away from current levels of violence, the odds of activating the communication device will be increased.
